

Environmental Policy

As food importers from numerous countries around the world, we recognise that every organisation has some impact upon the environment and we are therefore committed to a policy of continued improvement in the way in which we manage our environmental responsibilities in order to minimise the environmental impact of our operations.

Our responsibility starts with our offices and also extends to our own manufacturing facilities as well as other manufacturing partners and service providers throughout our supply chain.

Our policy is comprised of the following objectives :

- Communicate our objectives throughout our group and supply chain to promote individual good practice and to ensure staff awareness
- Monitoring the effects of our operations to minimise any adverse impact on the environment
- If practicable and wherever possible, give preference to environmentally aware suppliers who have a good understanding and acceptance of issues.
- Managing our Product range to ensure none cause any environmental damage during production, storage and transport to its destination.
- Encouraging our employees to respect environmental responsibilities and integrate recognised environmental practices into our operations.
- Evaluating our operations regularly and ensuring they are as efficient as possible.
- Working with key suppliers to encourage them to develop environmental best practices
- Improving resource efficiency, including our use of water, energy and raw materials.
- Complying with all relevant legislation and regulations
